How to call CabCash

Bluetooth

- Make sure the Devices are paired.
- Open a connection as shown in the CabCashAPIDemo App.
- Make sure the CabCash App has an active login and is on the MainPage.
- Send a command as described in the Command Section.

Bluetooth (SPP)

- Make sure the Devices are paired.
- The other device has to accept Bluetooth connections.
- start connection in the app:

- Make sure the CabCash App has an active login and is on the MainPage.
- Send a command as described in the Command Section.

Other App on the same Device

- Make sure the CabCash App has an active login and is on the MainPage.
- Send an Intent as shown in the CabCashAPIDemo App with a command as described in the Command Section.

Command Section

There are two basic commands, one for the single payment Activity and one for multi payment Activity.

Single Payment

dopayment,*article*,*price*,*comment1*,*comment2*

dopayment-> let the API know you want to do single Payment.

article-> Name of the Article. (The Article must be added in the CabCash App)

price-> A double value for the price to be payed.

comment1/comment2-> text base comment which will be shown in the Activity and on the bill.

Example: dopayment,cola,12.34,com1,com2

Multi Payment

domultipayment,*list of articles*,*comment*

domultipayment-> let the API know you want to do multi Payment.

list of articles-> a list of articles seperated by ";" and each seperated by ":" from the count. (All Articles must be added in the CabCash App)

comment-> text base comment which will be shown in the Activity and on the bill.

Example: domultipayment,cola:2;sprite:1,com
